Check for weedy species
in your garden.

Prevent a new generation of weeds growing by
removing flower heads before they fruit or seed.

Weed seeds can be carried on clothes and
footwear to new locations within your garden
(or the wider environment) or be brought in
amongst loads of soil or gravel.

Keep an eye out for any new weed in your
garden and act quickly to remove it. Once an
invasive weed takes hold, eradication can be
extremely hard and costly.

Make your place a
weed-free space
