

Take out weedy shrubs and trees

Woolly Nightshade

If you think that weeds don't grow very big, think again. Some of our worst weeds are large shrubs or trees, and they can live for a very long time.

Different weedy shrubs and trees cause problems in different areas of New Zealand. All of them can form dense stands that crowd out native species.

Many of them are still being grown in gardens, and are seeding into nearby natural areas.

Replace weedy shrubs and trees with non-weedy alternatives.
